

Technical Data Sheet

Evencure W30

Wax-Based Curing Compound

Description

Evencure W30 is a wax-based, sprayable curing compound formulated to cure freshly laid concrete.

It is a low to medium viscosity, white pigmented emulsion of specially blended waxes.

Evencure W30 meets the requirements of AS3799 for moisture retention in liquid membrane curing compounds.

EVENCURE W30 WILL NOT TAKE AFTERTRADES.

If aftertrades are going to be applied to surface mechanical removal of Evencure W30 is required.

*If unsure, please contact your Distributor or the Manufacturer for advice **before** the application of Evencure W30.*

Application

Evencure W30 is best applied with an airless spray (requires a minimum pressure of 280kPa (40psi)), but can be applied by brush, roller, or broom. It is imperative that application rate is achieved by whatever means. Evencure W30 performs best when one complete coat is applied, until a continuous uniform film is achieved.

Apply, undiluted, to the concrete as soon as the bleed water has disappeared, and the concrete has hard sufficiently so as not to be marked by the application process.

APPLICATION RATE:-

Curing 5²m per litre (according to AS3799 standards)

IT IS HIGHLY RECOMMENDED THAT APPLICATORS TEST ANY EVENRANGE SYSTEM BEFORE APPLICATION TO ENSURE COMPABILITY AS EACH SURFACE PROFILE VARIES WITH INDIVIDUAL CONDITIONS.

Available in 20lt, 200lt and 1000lt containers.

Note

After 30-35 days the continuous film formed on the concrete surface will begin to degrade due to exposure to UV light. The rate of degradation will depend on the film thickness and the degree of UV exposure. Evencure W30 can be used as a debonding agent when applied to the concrete sub-base prior to pouring the concrete base. This allows the two layers to expand and contract differently without producing cracking.

Features

- Suitable for sealing interior and exterior freshly laid concrete surfaces
- Low odour, low toxicity, and non-flammable
- Suitable for freshly laid smooth or textured concrete
