

## Technical Data Sheet

### Evencure EZI-Trackless

Tackless Emulsion Primer for Bitumen

---

## Description

---

Evencure EZI-Tackless is a fine particle, fast-drying, trafficable asphalt/bitumen emulsion used as an adhesion promoter between two layers of asphalt, once hotmix is applied as an overlay.

Evencure EZI-Tackless consists of modified monomers (currently used within the industry) and blended proprietary chemicals, contains NO solvents, and conforms to Greenstar requirements.

Unlike typical emulsions, Evencure EZI-Tackless does not require heating, is fast drying, and can be applied using ANY type of spray equipment usually used for bitumen application.

Evencure EZI-Tackless is highly stable in storage with minimal settlement over a 12-month period.

## Application

---

Due to the varying State requirements, Evenrange have formulated Evencure EZI-Tackless to be unique in application.

Evencure EZI-Tackless is applied to the profiled surface at a rate of .25-.5 litres per square metre. (depending on State requirements) until the treated surface has a consistent semi-gloss appearance. Once dried, Evencure EZI-Tackless can be overcoated immediately with asphalt fusing the two layers together.

It is advisable to adhere to “typical application rates” as set out by ARRB, Vicroads, RMS, or the specifying engineer.

*IT IS HIGHLY RECOMMENDED THAT APPLICATORS TEST ANY EVENRANGE SYSTEM BEFORE APPLICATION TO ENSURE COMPABILITY AS EACH SURFACE PROFILE VARIES WITH INDIVIDUAL CONDITIONS.*

---

## Typical Uses

---

- Adhesion promoter between two layers of asphalt, once hotmix is applied as an overlay.

---

## Features

---

- Can be sprayed between 5°C and 38°C without heating
- Dries within 30 minutes with zero “pick up”
- Totally water-based with no solvent odour
- Creates a waterproof barrier to protect works
- Conforms to Greenstar requirements
- Ideal bonding when compared to traditional emulsions

---
