

Concrete Treatment

AA – Aliphatic Alcohol

Evencure AA is a low viscosity blend in an aqueous solution. Evenrange AA is applied to freshly placed concrete surfaces, to reduce water evaporation during the critical “finishing” period of the concrete, particularly under adverse weather conditions such as high temperature, high winds and low humidity.

X-Pose Concrete Surface Retarder

Evenrange X-Pose Concrete Surface Retarder is a uniquely formulated liquid that retards the surface of the concrete, whilst allowing the subsurface to still harden. This unique feature allows easy removal of the treated concrete while the subsurface concrete remains hard and limits the failure of the aggregate bond in the exposed concrete.
